## SoftUni Judge System Guidelines

This document describes how assignments are sent and verified through the fully automated "SoftUni Judge" system. The system is online at https://judge.softuni.bg. The username and the password are the ones used for logging into https://softuni.bg.

## Fully automated testing system

Submitting exercises is fully automated and online. It is done through "SoftUni Judge": https://judge.softuni.bg.

- The assignments are checked online with the "SoftUni Judge" tool through a series of tests. Each successfully passed test brings points to the overall score for the assignment. A test is passed successfully when its result is correct and the testing time is within certain limits.
- The tests used by "SoftUni Judge" for verifying assignments are not revealed during competition mode.
- Each participant uses his/her username and password for https://softuni.bg to enter the judge tool.
- Submitting assignments and their verification happens in real time. Once an assignment is submitted, the judge tool responds in seconds with the following verification result:
- The amount of points the participant gets from the submitted solution - between 0 and 100
- A compile time error message
- The participant receives the following status information for every test:
- Correct result
- Wrong result
- Runtime error
- Time limit
- Memory limit
- The judge tool verifies the output from the tests symbol by symbol
- Each comma, unnecessary symbol or a missing whitespace results in $\mathbf{0}$ points for the corresponding test.
- Please do not include any unwanted information to your assignments, such as "Please enter $N=$ " when it is required to enter a number as an input. This will bring $\mathbf{0}$ points.
- If the output requires a number to be printed to the console (for example: 25), do not include any descriptive messages, such as "The result is 25 ". Print only what is asked in the assignment.
- The system supports public rankings in real time, accessible to all SoftUni students.
- The rankings display the points per assignment per student.
- The highest score achieved for every assignment is kept in the rankings. If a participant submits a solution that scores less than the solutions he/she has sent before, the system will not take points away.

## Programming Languages

The judge system supports the following programming languages:

- C\# (.NET 6) - C\# 10, .NET 6, x64 Ubuntu
- C\# - C\# version 7.3, CSC version 2.10.0.0, x64 Windows
- Java 11 - OpenJDK 11.0.13, x64 Ubuntu
- C 99 - GCC 7.5.0, x64 Ubuntu
- C++ 14 - GCC 7.5.0, x64 Ubuntu
- JavaScript - Node.JS version v12.22.9, x64 Ubuntu
- Python 3.6 - Python version 3.6.9, x64 Ubuntu
- PHP 7 - PHP version 7.2.24 (CLI), x64 Ubuntu

## An Example Assignment - Min3Numbers

You can test your solution for the Min3Numbers exercise with the judge tool at:
https://judge.softuni.bg/Contests/Practice/Index/132.
You are given an $\mathbf{N}$ amount of numbers: $a_{0}, a_{1}, \ldots, a_{N-1}$. Find the three numbers with the smallest values and print them on the console.

## Input

- The input consists of the following lines:
- First line: You will receive $\mathbf{N}$ - the amount of numbers
- N number of lines: Each line has one number

On the first line of the input you will receive $\mathbf{N}$ - the amount of numbers. On the next $N$ number of lines there will be one number per line. The input data will be correct and within the described format. There is no need to verify the input.

## Output

Print out to the console the three smallest numbers in increasing order. Print each number on a new line. If the numbers are less than three, print them anyway in increasing order.

## Constraints

- $\mathbf{N}$ is an integer within the range of [1 ... 10000 ].
- The numbers a0, a1, ..., aN-1 are integers in the range of [-100 000 ... 100 000].
- The time limit is 100 ms
- The memory limit is 16 MB

## Examples

You can find examples of inputs and their corresponding outputs in the tables below:

| Input | Output |
| :--- | :--- |
| 5 | -5 |
| 50 | 10 |
| 10 | 15 |
| 30 |  |
| 15 |  |
| -5 |  |

| Input | Output |
| :--- | :--- |
| 2 | 111 |
| 222 | 222 |
| 111 |  |
|  |  |
|  |  |

| Input | Output |
| :--- | :--- |
| 1 | 20 |
| 20 |  |
|  |  |
|  |  |

| Input | Output |
| :--- | :--- |
| 6 | -6 |
| -1 | -5 |
| -2 | -4 |
| -3 |  |
| -4 |  |
| -5 |  |
| -6 |  |

| Input | Output |
| :--- | :--- |
| 3 | 1 |
| 1 | 2 |
| 2 | 3 |
| 3 |  |
|  |  |
|  |  |

## Scroll down to see implementations in different languages.

## C\# (.NET 6) Solution

This is an example solution with C\#. The standard C\# console is used for the input and the output.

## Min3Numbers.cs

```
int n = int.Parse(Console.ReadLine());
int[] numbers = new int[n];
for (int i = 0; i < n; i++)
{
        numbers[i] = int.Parse(Console.ReadLine());
}
var smallest3Nums = numbers.OrderBy(i => i).Take(3);
foreach (var num in smallest3Nums)
{
    Console.WriteLine(num);
}
```

Constraints in the judge system about the C\# language:

- Supported version: C\# 10, .NET 6, 64-bit on Ubuntu.

## C\# (.NET 6) Solution

This is an example solution with C\#. The standard C\# console is used for the input and the output.

## Min3Numbers.cs

```
using System;
using System.Linq;
class Min3Numbers
{
    static void Main()
    {
        int n = int.Parse(Console.ReadLine());
        int[] numbers = new int[n];
        for (int i = 0; i < n; i++)
        {
            numbers[i] = int.Parse(Console.ReadLine());
        }
        var smallest3Nums = numbers.OrderBy(i => i).Take(3);
        foreach (var num in smallest3Nums)
        {
            Console.WriteLine(num);
        }
    }
}
```

Constraints in the judge system about the C\# language:

- Supported version: C\# 7, Microsoft Visual C\# Compiler, 64-bit on Windows.
- In case multiple classes are implemented, they must be all placed inside of one file, one after another. There may be only one Main() method.
- Libraries outside the .NET Framework 4.7 standard are NOT to be used.
- Only the Wintellect.PowerCollections library is accepted.

## C++ Solution

This is an example solution with $\mathrm{C}++$. The standard $\mathrm{C}++$ console is used for the input and the output.

## Min3Numbers.cpp

```
#include <vector>
#include <iostream>
#include <algorithm>
using namespace std;
int main() {
    int n;
    cin >> n;
    vector<int> numbers;
    for (int i = 0; i < n; i++) {
        int num;
        cin >> num;
        numbers.push_back(num);
    }
    sort(numbers.begin(), numbers.end());
    int count = 0;
    for (auto it = numbers.begin(); it != numbers.end(); ++it) {
        cout << *it << endl;
        count++;
        if (count >= 3) {
            return 0;
        }
    }
    return 0;
}
```

Constraints in the judge system about the C++ language:

- Supported version: C++ 11, GCC 7.5.0 on Ubuntu.
- Libraries outside the standard C++ STL are NOT to be used.
- The type long is 32 bits.

## C Solution

This is an example solution with C . The standard C console is used for the input and the output.

## Min3Numbers.c

```
#include <stdio.h>
#include <stdlib.h>
int int_compare(const void *a, const void *b) {
    return (*(int*)a - *(int*)b);
}
int main() {
    int n;
    scanf("%d", &n);
    int* numbers = (int*)malloc(sizeof(int) * n);
    for (int i = 0; i < n; i++) {
        scanf("%d", &numbers[i]);
    }
    qsort(numbers, n, sizeof(int), int_compare);
    int count = (n< 3) ? n : 3;
    for (int i = 0; i < count; i++)
    {
        printf("%d\n", numbers[i]);
    }
    return 0;
}
```

Constraints in the judge system about the C language:

- Supported version: C99, GCC 7.5.0 on Ubuntu.
- Libraries outside the standard library are NOT to be used.
- The type long is 32 bits.

## Java Solution

This is an example solution with Java. The standard Java console is used for the input and the output.

## Min3Numbers.java

```
import java.util.Arrays;
import java.util.Scanner;
public class Min3Numbers {
    public static void main(String[] args) {
        Scanner scan = new Scanner(System.in);
        int n = scan.nextInt();
        int[] numbers = new int[n];
        for (int i = 0; i < n; i++) {
            numbers[i] = scan.nextInt();
        }
        Arrays.sort(numbers);
        for (int i = 0; i < Math.min(n, 3); i++) {
            System.out.println(numbers[i]);
        }
    }
}
```

Constraints in the judge system about the Java language:

- Supported version: Java 11, OpenJDK 11.0.13, 64-bit on Ubuntu
- Libraries outside the standard JDK 11 library are NOT to be used.
- There must be only one public class with a main(args) method.
- In case of the implementation of various classes, they must be all placed inside of the source code, one after another. It is required that only one of them is public.

## JavaScript Solution

This is an example solution with JavaScript. The input from the function solve(arr) is an array of strings. The output is to be printed on the console.

## Min3Numbers.js

```
function solve(arr) {
    var numbers = arr.splice(1).map(Number);
    numbers.sort(function (a, b) { return a - b; });
    let smallest3Numbers = numbers.slice(0, 3);
    for (let num of smallest3Numbers) {
        console.log(num);
    }
}
```

Constraints in the judge system about the JavaScript language:

- Supported version: JavaScript on Node.JS version 12.22.9, 64-bit Ubuntu
- Submitted only one function solve(arr), which receives the input as an array of strings.
- If multiple functions are used, they must be all placed inside the main function.
- Printing on the console is to be done with console. $\log (. .$.$) .$

## Python Solution

This is an example solution with Python. The standard Python console is used for the input and the output.

## Min3Numbers.py

```
n = int(input())
nums = list()
for i in range(0, n) :
    nums.append(int(input()))
nums = sorted(nums)
count = min(len(nums), 3)
for i in range(0, count) :
    print(nums[i])
```

Constraints in the judge system about the Python language:

- Supported version: Python 3.6.9, 64-bit on Ubuntu
- The input is to be read with the standard input() or with sys.stdin.
- The output is to be printed with the standard print() or with sys.stdout.

## PHP Solution

This is an example solution with PHP. The standard CLI console is used for the input and the output.

## Min3Numbers.php

```
<?php
    fscanf(STDIN, "%d", $n);
    $numbers = array($n);
    for ($i=0; $i < $n; $i++) {
        fscanf(STDIN, "%d", $numbers[$i]);
    }
    sort($numbers);
    $smallest3Numbers = array_slice($numbers, 0, 3);
    foreach ($smallest3Numbers as $num) {
        fprintf(STDOUT, "%d\n", $num);
    }
?>
```

Constraints in the judge system about the PHP language:

- It is supported: PHP 7 CLI (command line interface), engine PHP version 7.2.24, 64-bit on Ubuntu
- The input is read from the standard input - a file with a name STDIN.
- The result is printed with the standard output - a file with a name STDOUT.

## Link to the SoftUni Judge system - Min3Numbers

You can test your solution for the Min3Numbers exercise with the judge tool at:
https://judge.softuni.bg/Contests/Practice/Index/132.

## Submitting a solution

Once you have logged-in at SoftUni Judge, submitting a solution is done from your user interface:

## Results

The results from the submitted solutions appear in the table below the submit form a couple of seconds after sending them:
